WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

REPORT NO. 140
PAGE 1

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

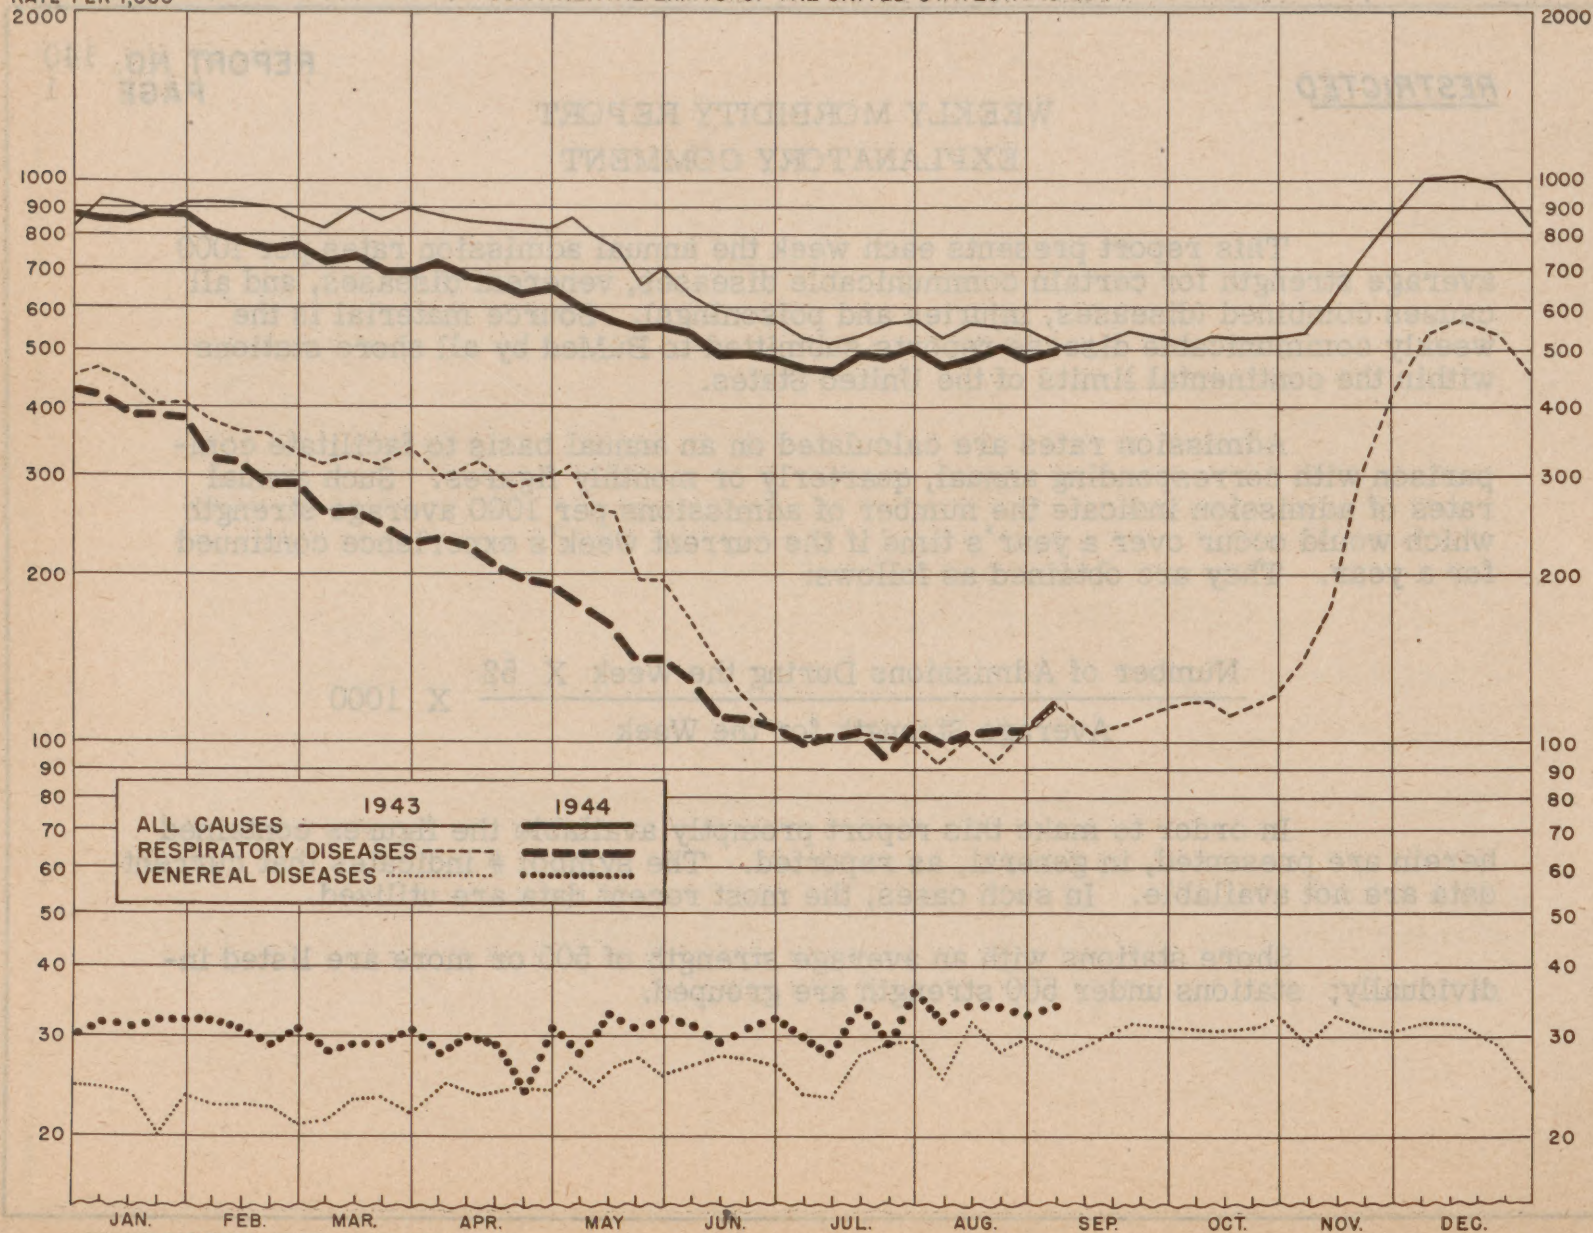

RESTRICTED

CURRENT TRENDS

Week Ending 2 Sep 1944

The admission rate for All Causes after a fall in the previous week rose slightly again this week, but the 1944 curve continues to stand below the 1943 curve. The highest rate (996) was reported for the Potomac and Severn River Commands, the lowest (317) for the 12th District.

The respiratory disease curve rose sharply this last week to the highest point recorded since the week ending June 3. The curve for these infections turned up in all Districts except the 4th, 6th, 7th, and 12th. The highest rate (253) was reported for the 13th District, the lowest (57) for the 12th District.

The venereal disease curve turned up slightly after a slight fall in the previous week. The curve continues to stand well above the 1943 curve. The highest rate (44) was reported for the 8th District, the lowest rate (15) for the 6th District.

Influenza and Catarrhal Fever. The curve for these infections turned upward this week to the highest point recorded since the week ending June 3. The 1944 curve continues to stand well below both the 1942 and the 1943 curves for the corresponding period. The 13th District reported the highest rate (129), the 12th District the lowest (40).

Pneumonia--Broncho and Lobar. The rate for these infections dropped below one this week. The curve stands at the lowest point recorded in 1942, 1943, or 1944 to date. The highest rate (3) was reported for the 13th District. The 4th District and the Potomac and Severn River Commands reported no cases.

Pneumonia, Atypical. The atypical pneumonia curve continued another week at 2, still above the 1943 curve for the corresponding period and above the curve for broncho and lobar pneumonia. The 11th District reported the highest rate (5). The 1st District reported no cases.

Tonsillitis and Pharyngitis, Acute. The rate for these infections rose slightly this week.

CURRENT TRENDS --CONTD.

The 13th District reported the highest rate (120), the 12th District the lowest (16).

Rheumatic Fever, Acute. After a slight fall in the preceding week the curve turned back up to 1 again this week. The rate of 1 for this week compares favorably with a rate of 1.3 for the corresponding week of 1943. The 13th District reported by far the highest rate (10). The 4th and 6th Districts and the Potomac and Severn River Commands reported no cases.

Scarlet Fever. The scarlet fever curve continues an upward trend which started the week ending Aug. 19. The rate of 4 compares favorably with a rate of 4.9 for the corresponding week of 1943. By far the highest rate (59) was reported for the 13th District. This is the highest rate reported for scarlet fever in the 13th District since the first week in February. The curve turned upward in the 3rd, 8th, 9th, 11th, and 13th Districts. Five Districts and the Potomac and Severn River Commands reported no cases.

Cerebrospinal Fever, Meningococcic. The rate for this infection rose slightly but the general trend appears to be still downward. The 1944 curve stands well below the 1943 curve for the corresponding period. The 4th and 11th Districts were the only ones reporting cases.

Malaria. The malaria curve rose sharply to the highest point recorded since the week ending Feb. 5. The rate of 4 for the week compares favorably, however, with a rate of 7 for the corresponding week of 1943. The highest rate (9) was reported for the 6th District, the lowest rate (0.64) was reported for the 9th District.

Measles. The downward trend in the measles curve continued and there was a sharp drop to 0.49. The curve stands below the 1942 and 1943 curves for the corresponding period. The 13th District reported the highest rate (2). The 1st, 6th, 7th, and 8th Districts and Potomac and Severn River Commands report no cases.

WEEKLY MORBIDITY REPORT

REPORT NO. 140
PAGE 5

CURRENT TRENDS --CONTD.

Poliomyelitis, Anterior, Acute. Three new cases of poliomyelitis were reported for the week by Continental Shore Stations--2 from the 3rd District and 1 from the 9th District. The cumulative total of poliomyelitis cases reported from all Continental Stations Jan 1 through Sept 2, is 37. *

The U. S. Public Health Service reports for the week show the civilian cases in the six States with the highest incidence distributed as follows:

New York	666	Ohio	105
Pennsylvania	162	New Jersey	67
Michigan	120	Virginia	65

* Several of these cases were not reported on Weekly Morbidity Report NavMed-172.
